About me

- Ph.D. in Natural Language Processing and Artificial Intelligence at Masaryk University
- 10 years at seznam.cz (last 8 years as Head Of Research)
- Founder and co-organiser of ML Prague
- Author of the ML Guru blog
- Mentor at StartupYard and Startup AI Incubator
- ML Freelancer and consultant

Outline

Day 1

- Introduction to machine learning
- Types of ML tasks
- Data preparation
- Model evaluation
- Basic classification algorithms
- Scikit-learn tutorial
- Practical classification task
- Basic regression algorithms
- Regression model evaluation
- Practical regression task

Outline

Day 2

- Dimensionality reduction
- Basic clustering algorithms
- Practical clustering task
- Introduction to neural networks
- Activation functions for neural networks
- Multilayered neural networks
- Methods for training neural networks
- Kears tutorial
- Practical classification and regression tasks solved using neural networks

What is (not) machine learning?

Data

- Train, validation, test data sets
- Cross-validation
- Imbalanced data sets
- Baseline models

Model evaluation

$$\text{Accuracy} = \frac{tp + tn}{tp + tn + fp + fn}$$

$$\text{Precision} = \frac{tp}{tp + fp}$$

$$\text{Recall} = \frac{tp}{tp + fn}$$

$$F = 2 \cdot \frac{\text{precision} \cdot \text{recall}}{\text{precision} + \text{recall}}$$

Source: <https://www.wikipedia.org>

$$\text{Precision} = \frac{\text{How many selected items are relevant?}}{\text{How many selected items are relevant?} + \text{How many irrelevant items are selected?}}$$

$$\text{Recall} = \frac{\text{How many relevant items are selected?}}{\text{How many relevant items are selected?} + \text{How many relevant items are not selected?}}$$

Overfitting detection

Conditional probability

$$P(A|B) = \frac{P(A \cap B)}{P(B)} = \frac{P(A)P(B|A)}{P(B)}$$

$$A \perp B \iff P(A \cap B) = P(A)P(B)$$
